

sides of the first pool and cheese block pool to be brought in to create a fast narrow channel only as shown by the blue lines

the dog leg by the muncher is to be half removed to make way for increased eddies

the chicken shoots are to be blocked off with gates to create a fast main channel only

channel obstacles

all concrete blocks to be removed and replaced with plastic 'Omniflats' as seen already just after the first pool. this means the muncher and bottom stopper will be removed totally. the red areas show the Omniflat locations in the river bed

river bed profile
